## Tenants' Guide to Legionnaire's Disease

Please keep this leaflet for information Purposes

## Legionnaire's Disease

This leaflet has been provided to inform you about the risks of contracting Legionnaire's disease, and how to safely prevent it.

As your Landlord / Agent we have a legal obligation to ensure you are aware of the possible causes and symptoms of Legionnaire's disease so you can identify any problems easily and report any concerns to us.

### What is Legionnaire's disease?

Legionnaire's disease is a potentially fatal form of pneumonia, which can affect anybody. It is caused by the inhalation of small droplets of water from contaminated sources containing legionella bacteria.

### Where is Legionella found?

All hot and cold water systems in residential properties are a potential source for legionella bacteria growth. The main areas of risk are where the bacteria can multiply and increase to dangerous levels and then spread, e.g. in spray from showers and taps, even in dishwasher and washing machine pipes.

Conditions ripe for colonisation are where water of between 20°C and 45°C stagnates, and where there is sludge, rust and scale present for the bacteria to feed upon and multiply.

### Who is at risk?

Legionnaire's disease most commonly affects the elderly, or people with chest or lung problems. Not everyone exposed to legionella bacteria becomes ill.

Legionnaire's disease is not contagious and you cannot get it from drinking water.

On average, there are approximately 500 reported cases of Legionnaire's disease a year.

Legionnaire's disease is easily preventable by putting in place some simple control measures.

The information within this leaflet will help you to do this

### What precautions can I take?

Taking the following simple precautions will help keep you safe:

- Flush through showers and taps for 10 minutes following a period of non-use (i.e. after you have been on holiday or if a room is not in regular use)
- Keep all shower heads and taps clean and free from a build-up of lime scale, mould or algae growth
- Keep hot water on your boiler system at a temperature of 50°C or greater.

### **WARNING: BE AWARE OF SCALDING!**

Report any deposits such as rust or any unusual matter flowing from your water outlets
